

ARP Turf Systems

Athletic and Recreation Products, Inc. offers in-filled synthetic turf systems combining the appearance of natural grass with the all-weather playability, low maintenance and durability of synthetic turf. This advanced vertical-to-horizontal drainage technology uses a dynamic drainage and shock attenuation blanket that eliminates standing water. ARP Turf Systems are manufactured to the highest industry standards and latest advances in synthetic turf technologies.

ARP Turf Components

Eliminates Fly-Out

Maximized grass and minimized infill separate the athlete from the infill and stabilizes footing. Rubber infill is under warranty for 8 years.

Excellent Drainage

Stone base circumvented as a conductive median for water. Evacuation rates can be pre-determined.

Climatic Dimensional Stability

A tertiary backing is added to the primary and secondary backings, creating an extremely stable product.

No Fibrillation or Premature Wear

Pre-configured yarn design will not fibrillate at all. At least seven times the wear-resistance of any fibrillation pattern.

G-Max Never Exceeds 150 (8-yr. warranty)

The safest, player-friendly sport surface ever developed. Natural "firm" foot feel.

Lower Surface Temperatures

Maximum possible heat reduction. There is no exposed infill, therefore, no solar energy absorption.
